

Bloom bats for change

NCR, Gurgaon Edition

Date of Publishing: 08 Dec 2012

Students from Environment Club have met the in-charge of these institutions, Indian Spinal Injury Centre chairman, French Ambassador, Indonesian Ambassador, etc and have given a presentation. As a result, the school was able to collect 900 kg of Tetra Pak and has sent it for recycling. The project got selected by Greening with Goethe, the environment project by the German Embassy, two students from Bloom Public School represented the environment seminar in Bangalore and sensitised many more people from all over the world from December 1 to 3. Our endeavour is to reach out to as many people and institutions as possible and bring a change in their thought process. The school has a blog - www.teritetrapak.weebly.com

Bloom Public School, which is a part of project SEARCH (Sensitisation Education Awareness Recycling for a Cleaner Habitat) started by TERI in 2009, has been working relentlessly to bring change. Bloom was enrolled in 2011 in this project. The project aims:

- To raise awareness amongst school students on environment in general and recycling in specific.
- To install good waste management practice.
- To educate children on benefit of carton packaging.
- To inculcate the habit of recycling of waste amongst students thus indirectly help in saving the environment.

The schools from Delhi, Bangalore and Mumbai were given a target to collect empty Tetra Pak cartons and send it for recycling. Bloom made a big difference by giving this project a new dimension as the school tied up with the neighbourhood RWAs, Indian Naval Officers Mess, defence institutes, hospitals such as Indian Spinal Injury Centre, organisations such as UNICEF, Embassy of France, Indonesian Embassy, etc.
